To solidify understanding, students should work through a variety of problems:

- Compute the partial derivatives of a complex multivariable function.
- Set up and evaluate a double integral over an irregular region using polar coordinates.
- Find the flux of a vector field across a specified surface.
- Use Green's theorem to evaluate a circulation integral.
- Apply the divergence theorem to compute the flux through a closed surface.

Additionally, conceptual questions such as:

- "What is the physical meaning of the gradient vector?"
- "When is a vector field conservative?"
- "How does Stokes' theorem relate line integrals to surface integrals?"

Help deepen understanding beyond rote calculations.
