Solution:

- Prime factorization:
 - $48 = 2^4 \times 3$
 - $60 = 2^2 \times 3 \times 5$
- Common factors:
 - 2^2 (since minimum exponent of 2 in both is 2)
 - 3 (present in both)
- $HCF = 2^2 \times 3 = 4 \times 3 = 12$

Problem 2: The perimeter of a rectangle is 48 cm. If the length is 3 times the breadth, find the length and breadth.

Solution:

- Let breadth = x cm
- Then, length = $3x$ cm
- Perimeter, $P = 2(l + b) = 48$
- Substitute:
 - $2(3x + x) = 48$
 - $2(4x) = 48$
 - $8x = 48$
 - $x = 6$ cm
- Breadth = 6 cm
- Length = $3 \times 6 = 18$ cm

Enhancing Conceptual Clarity

When students interact with physical models, they tend to develop a clearer understanding of the underlying concepts. For example, a 3D model of a cylinder or cone elucidates the differences between their surface areas and volumes, which can be confusing when only studied through diagrams or equations.

Encouraging Active Learning

Working models foster active participation. Instead of passively listening to lessons or reading textbooks, students can manipulate models, observe the effects of changing dimensions, and draw conclusions based on their hands-on experience. This active engagement results in better retention and improved problem-solving skills.

Designing and Using Effective Maths Working Models

Key Principles for Model Creation

- Simplicity: Models should be simple enough for students to understand and manipulate.

- Accuracy: Ensure that the models correctly represent the mathematical concepts.

- Durability: Use sturdy materials to withstand handling by students.

- Interactivity: Incorporate movable parts or adjustable features to facilitate exploration.

Practical Tips for Educators and Students

- Start with Basic Models: Begin with simple models and gradually progress to more complex ones.

- Encourage Hands-On Participation: Students should actively engage with models rather than passively observe.

- **Relate Models to Real-Life Situations:** Connect models to real-world applications to enhance relevance.
- **Use Models for Problem-Solving:** Incorporate models into exercises and assessments to reinforce learning.

Benefits of Using Maths Working Models in Class 10

Improved Conceptual Understanding

Models help demystify complex topics, making them accessible and easier to comprehend. For example, visualizing the sine wave in trigonometry aids in understanding periodic functions.

Increased Student Engagement

Interactive models make learning fun and stimulating, which can motivate students to explore mathematical concepts beyond classroom instructions.

Better Preparation for Board Examinations

Since many exam questions are based on visual and conceptual understanding, familiarity with working models can give students an edge in answering diagram-based and application-oriented questions.

Development of Critical Thinking and Analytical Skills

Handling models requires observation, experimentation, and deduction?skills that are vital not just in mathematics but in overall academic development.

Challenges and Solutions in Implementing Maths Working Models

Challenges

- **Resource Limitations:** Not all schools may have access to a wide variety of physical models.
- **Time Constraints:** Developing and using models can be time-consuming.
- **Lack of Skilled Guidance:** Teachers may need training in effectively integrating models into their pedagogy.

Solutions

- DIY Models: Encourage students and teachers to create models using inexpensive and recyclable materials.
- Digital Models: Use computer-based simulations and animations to supplement physical models.
- Professional Development: Conduct training sessions for teachers on effective use of models.
